In Regards to:

EcoSpace Engineering Ltd. - Pilot Plant for Processing of Chicken Manure using Fly Larvae.

Research Program with University Of Guelph – Ron Fleming, Coordinator Environmental Management Program

I am writing to express my strong support for the research program that EcoSpace and the University of Guelph is submitting for funding support.

Reeves Florist and Nursery has a continuing interest in the commercial market possibilities for the output from the manure management/conversion technologies that EcoSpace is developing.

The market place is in transition to more (or completely) organically based products. The most important advances made during this transition will be associated with cost effective, environmentally positive products. I believe that Ivan's work will lead to a new supply of plant nutrition products that will play a major role in the burgeoning organic fertilizer market. If the potential of this project is realized, I believe that it will be one of the most positive advances seen in my professional life.

Beyond the apparent cost-effectiveness of this program, it also stands to ameliorate the significant environmental problems that current farming practices have with manure management. This will be a win-win for both the farming community and the home/landscape green industry as well.

I honestly believe that this is one of those "Big Ideas" that only comes along once in a generation. I freely offer my enthusiastic endorsement of this program.

We would like to offer you support for the establishment of a pilot processing facility and, in addition, we would like to attend management and progress meetings at the facility over the term of the project.

I look forward to hearing that you have been successful in obtaining funding support.

My best regards,

Bob Reeves
